PLANT OPTIMISATION STRATEGY UPDATE

Niuminco Group Limited (“Niuminco” or “the Company”) is pleased to advise that the new, larger vibrating feeder has now been installed, and that modification works to the feed hoppers have been completed. Commissioning and testing is currently taking place with the feeder and mill running for 5 hours per day over the past two (2) days, processing approximately 20 tonnes of wet ore on each of those days.

Mining and screening of feed material is continuing with material currently being sourced from the “Alpha West” (or main Edie Lode vein) vein system (pictured below) and will also be sourced from the Surmans area in coming weeks.

Niuminco Managing Director, Tracey Lake said “The installation of the new vibrating feeder and the upgrades to the mill feed plant will provide significantly increased processing capacity going forward.”
